About

We are based in the White Mountains of New Hampshire and Western Maine. Trainer can travel to your site.

Rigging for Trailwork - We offer comprehensive trail rigging workshops that cover basic operations to advanced aerial and multi-hoist systems. During this course participants learn how to safely setup and operate griphoist rigging systems, how to identify and quantify forces within a system, and griphoist care and maintenance. Hands-on courses range from 1 to 4-day progression and do not require prior experience.

Stonework - We offer comprehensive dry-stone workshops that cover the principals of dry-stone masonry, as well as stone splitting, shaping, and micro-blasting

New Trail Survey & Design - We offer comprehensive trail design workshops covering everything from planning, site surveys, GIS data collection, and determining optimal trail alignment

Stream Restoration - We offer comprehensive stream woody-addition workshops covering tree selection and recruitment, structure installation and design, and outcome-driven best practices (as developed in New Hampshire, Vermont, & Tennessee).

Trainings and Certifications/Credentials

Trainings	Certifications or Credentials
• Carpentry • Trails • Trails Rigging • Masonry/Stone Work • GIS • Stream Restoration	Participants will receive Certificates of Completion for each course

Target Audience

Staff, Corpsmembers

Booking

Delivery Method:	In-person
